PROJECTS

CAFÉ WEBSITE | [Live Demo](#) (Freelancing)

Nov 2024

- Optimized a client website built with HTML, CSS, and JavaScript, increasing organic traffic by 70% within the first month through targeted SEO strategies.
- Conducted keyword research and competition analysis using Uber suggest, identifying 10+ high-impact keywords with a search volume of 500+ monthly searches and low competition.
- Performed comprehensive website auditing and implemented on-page, off-page and technical SEO changes, resulting in a 60% improvement in site speed and 15% reduction in bounce rate.

IOT BASED MEDICAL ASSESSOR AND PREDICTOR FOR HEALTH CARE SOLUTIONS

June 2024

- Engineered an innovative IoT solution that integrates various medical sensors to continuously monitor patient vitals. This system enabled real-time data collection and remote health assessment, enhancing patient care and early intervention capabilities
- Utilized advanced machine learning algorithms to analyze collected health data and predict potential medical conditions. This predictive model improved the accuracy and timeliness of diagnoses, contributing to better patient outcomes and proactive healthcare management.

TOURISM WEBSITE | [Live Demo](#)

May 2023

- Developed a responsive tourism website using HTML, CSS, and JavaScript, ensuring an intuitive user experience and mobile optimization.
- Conducted website auditing and implemented targeted changes to enhance site performance and user experience.
- Built high-quality backlinks by evaluating domain authority (DA) and page authority (PA) of linking websites, increasing the website's credibility.
